MACHINE VISION LENSES

Keen eyes for manufacturing

On the production floor, companies continue to seek ever greater safety, security, and product quality. RICOH's latest "keen eyes" were created to support such advances in reliable manufacturing.

These series of high-quality factory automation (FA) lenses bring together all the advanced optical design and technology that RICOH has developed over many years.

Moving forward, we will support even higher production-line efficiency and reliability by continuing to develop the best high quality lenses optimised for FA cameras and by combining an extensive range of lenses in a way that ensures a dependable image solution.

RICOH'S ADVANTAGE

RICOH technology has developed excellent optical characteristics even at the periphery, despite the problems with resolution, contrast, distortion and vignetting that competitor's lenses suffer from.

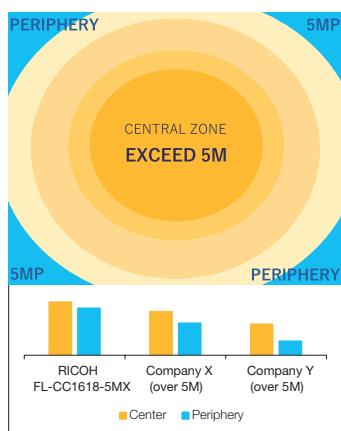

- You can obtain high quality images over a wider viewing area.
- Inspection systems have improved performance due to RICOH lenses high performing peripheral imagery.

REPORT 1 : RICOH'S OPTICAL DESIGN, BASED ON MACHINE VISION'S DEMAND.

Clear images to the periphery

2/3" format 5 Mega-pixel lens

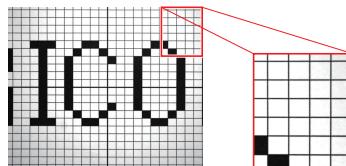

- 5MP at all distances, maintains 5MP even at the periphery.

WD : 250 mm
investigated by RICOH

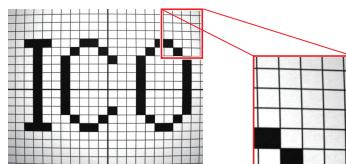

[Extremely low distortion]

FL-CC1618-5MX (w.d.100 f1.8)

- Low distortion achieves low image degradation at the corners.

Sensor Standard lenses (w.d.100 f1.8)

- Larger distortion at the corner.

REPORT 2: PROVIDING THE MARKET WITH HIGH PERFORMANCE LENSES

1. Optical simulation technology supported by actual results

To realise this product, we shared information on our vital optical design technology with other products in the Ricoh Group and are always introducing new technology. We introduced Ricoh original algorithms for resolution and ghost analysis, and in post-design trials, we confirmed the characteristics on actual equipment were the same as in our simulations. These results are fed back into the simulations, which in turn helps us improve our technology to ensure performance and build on pre-existing technology.

2. Tolerance accumulating technology with due attention to variations during mass production

Ricoh has created a parts tolerance accumulation system that is replete with our inherent knowledge of optical units, maintaining part processing precision and yield. We establish the required precision at part level in accordance with Ricoh's original algorithms and verify them.

3. Precision adjustment technology during mass production

We have introduced adjustment technology to precision lens processing and assembly to our production process, concentrating the precision adjustment technology created by the Ricoh Group to produce lenses that are even more advanced.

VGA LENSES MANUAL IRIS

An extensive line of general-use lenses boasting high-performance lens technology featuring vibration-control measures, these lenses are a superior choice for installation in machine vision systems.

Built for a wide variety of uses, including pattern matching, component positioning, missing-part inspection, board mounting and inspection of pharmaceuticals, produce, and grains.

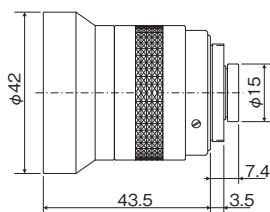

- Standard lenses for machine vision use
- Compatible with VGA-class cameras
- Production line handling cameras from 1/2" to 1" formats
- Lock screws as standard vibration-control measures

2 MEGAPIXEL LENSES 1/2" AND 2/3"

2 megapixel type lenses for a wide range of applications: Select the optimum lens for your focal length and format size requirements.

These manual-iris lenses are an optimal choice for image processing data capture at 2 megapixels. With their compact size and high performance, they deliver great results for high-precision manufacturing inspection (chip mounters, wafers, electronic substrates, etc.).

- High-performance lenses for close-up imaging with 2 megapixel CCD and CMOS sensors
- Sharp high resolution, high contrast images, that limit resolution loss from the center to periphery
- With compact size, light weight, and durability, these are excellent lenses for FA and machine vision use
- They greatly reduce distortion that causes problems in image measurement and recognition
- Built to handle environments with vibration, etc.
- Easy to use, reliable focus and iris locking mechanisms as standard features

2 MEGAPIXEL LENSES ALL 2/3"

The new lenses following customer's requests now consistently have a 2/3" format, expanding the line-up next to the existing and very successful 2 Megapixel series. With the new lens design, all values are again improved, so the lenses are ideal for a wide range of applications.

- Bright images from the center to the edges:** Degradation of light transmission at the periphery has been kept to an absolute minimum enabling the new lenses to reproduce bright, high resolution images from the center to the periphery.

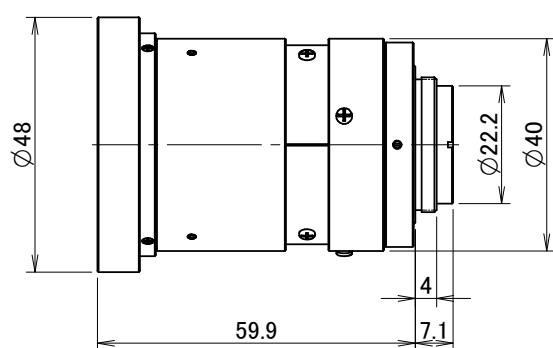

- High Resolution and High Contrast even at the periphery:** Minimal degradation of resolution and contrast right through to the periphery. Therefore, even images right on the periphery are suitable for measurement and inspections.
- Shortened MOD (Minimum Objective Distance):** Thanks to the newly developed optics, MODs have been shortened to 0.1m (except FL-CC5024A-2M), enabling further close-up imaging without the need for distance rings.
- Low distortion:** Troublesome distortion for measurement and recognition applications has been reduced (0.02% to max. 0.56%).

5 MEGAPIXEL LENSES

This series of high-res lenses are designed to match the requirements of highly developed machine vision systems. The lens isn't only optimized for highest image quality, but also for heavy duty industrial operation.

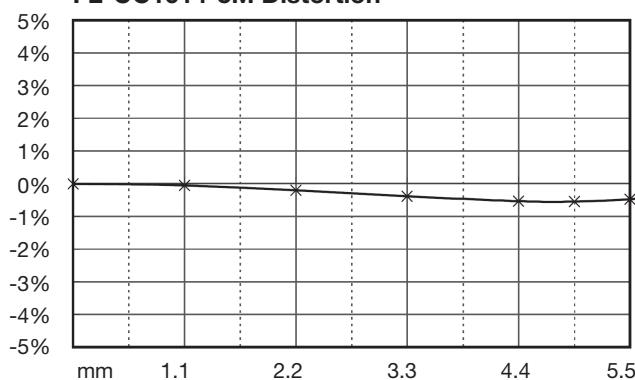

They are perfect for inspection, pattern matching, and alignment uses in which images with high definition from edge to edge definition are needed for large subjects such as wafers, chip mounters, board mounting, etc.

- Compatible with pixel size 3.45µm, 5 megapixel on 2/3" cameras
- High resolving power of 140 lp/mm from centre to corners of the image
- FL-CC1614-5M, FL-C2514-5M: 1% or less distortion, suitable for image measurement
- 40% increased light distribution
- Fast aperture F1.4
- Ideal for integration in highly developed machine vision systems
- Stable design, robust and durable
- With locking and thumb screws

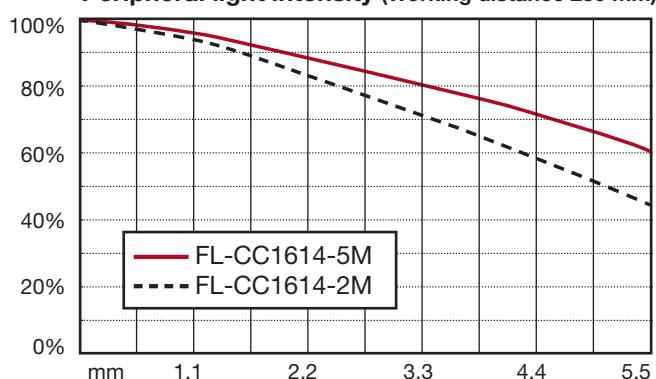

FL-CC1614-5M Optical transfer function

FL-CC1614-5M Distortion

Peripheral light intensity (Working distance 250 mm)

High resolution and high contrast

Supports 2/3" format, 5 megapixel CCD camera with 3.45µm pixel pitch. Achieves 140 lp/mm high resolution from center to periphery. Produces sharp, high-clarity images with high-contrast and low resolution loss all the way to the edge.

Ø 43 mm / 60 mm compact design

Consistent with the 44 mm-square cases used by many 5 megapixel cameras, we have achieved a size reduction to 43 mm for the outer diameter. These lenses are an excellent choice for installation on high-performance devices..

Extremely small level of optical distortion

For both the FL-CC2514-5M and the FL-CC1614-5M, optical distortion on the diagonals is less than 1%. TV distortion is held to less than 0.2%. The resulting extremely low-distortion images are also excellent for use in the image measurement field.

Bright to the periphery

Despite the F43 mm diameter, the optics accommodate 5 megapixels with F1.4 brightness. With peripheral-light-intensity falloff held to an absolute minimum, it is possible to obtain bright and high-resolution images. Although they are wide-angle lenses, with the iris open we were able to raise the peripheral light level to 70% (diagonals) and thereby achieve images that are bright and clear all the way to the periphery.

EXCEEDING 5 MEGAPIXEL LENSES

This series of 5 megapixel lenses are developed to be used with 2/3" format cameras and are not only optimised for high image quality, but also for use in harsh environments and durable industrial systems.

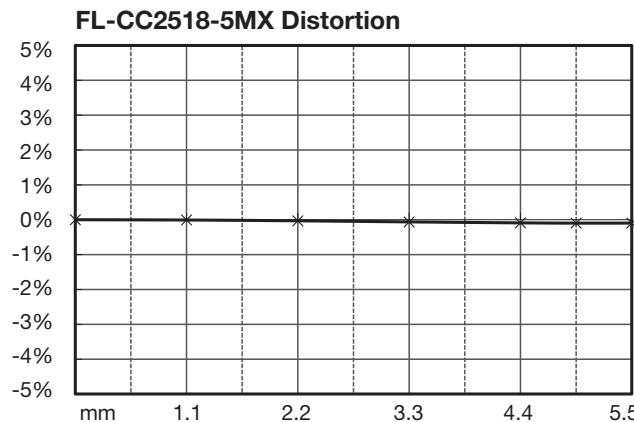

The lens's focusing uses a floating mechanism design, reducing aberrations from an infinite to close working distance. Therefore, the lenses can also be used at distance in intelligent traffic technology.

A floating focusing mechanism focuses whilst changing the spacing of some of its optical systems in order to minimize changes in aberrations due to object distance. The lens's construction is divided into a focus group that moves when focusing and a fixed group that remains stationary.

FL-CC1218-5MX f12 MTF Comparison

- [A] Competitor's 5 MP Lens:
Large distortion caused lower MTF result
- [B] Competitor's 12 MP Lens
- [C] Competitor's 5 MP Lens:
High central MTF, very low peripheral MTF
- [D] Competitor's 10 MP Lens

NEW 5 MEGAPIXEL LENSES

- Focal Length 12 mm, 16 mm, 25mm
- Pixel Pitch 3.45 µm
- Ø 33mm compact design, robust and durable with locking screws
- JIIA S-Rank¹ Performance, 147 lp/mm from center to corners
- Even light distribution, bright and clear to the periphery
- Floating Focusing Mechanism produces high resolution images at all working distances
- Distortion less than 0.1%

Extremely low distortion

The optical distortion of this series is < 0.1%. The resulting extremely low distortion images are excellent for use in the image measurement field.

Compact design, Ø 33 mm

These lenses have a 33 mm compact design, ideal for installation with high performance equipment.

Bright and clear to the periphery

Despite the small diameter of 33 mm, the vignetting has been reduced to the minimum. Combined with the 5 megapixel resolution, bright, high contrast images are achieved all the way to the edges.

High resolution and high contrast

Supports 2/3" format, 3.45µm pixel pitch cameras, producing sharp 147 lp/mm high resolution, high contrast images from the center to the periphery.

*1 JIIA Technical Report LER-007:Recommended specifications for high definition camera lenses

- Applications (S-Rank): For applications requiring higher resolution over the entire image
- Evaluation Criteria (S-Rank): Resolving spatial frequency corresponding to the Nyquist frequency over the entire image

9 MEGAPIXEL LENSES (1") / 12 MEGAPIXEL LENSES (1.1")

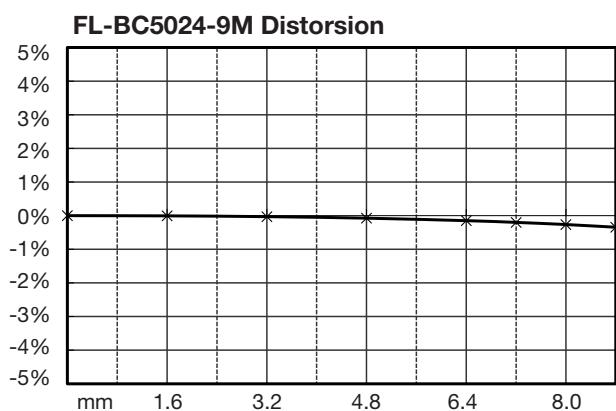

This series of high resolution lenses are developed to be installed in machine vision systems with cameras with sensors up to 9 megapixel for 1 inch format / 12 megapixel for 1.1 inch format.

- Focal Lengths 12 mm, 16 mm, 25 mm, 35 mm, 50 mm, 75 mm
- Pixel pitch 3.45 µm
- 147 lp/mm from center to corners of image
- Extremely low distortion, suitable for image measurement
- Even light distribution
- Locking Screws
- Ideal for integration in systems with large sensors
- Compact design, robust and durable

High resolution and high contrast

Supports 1" format, 9 megapixel / 1.1" format, 12 megapixel cameras. Achieves 147 lp/mm high resolution from center to periphery.

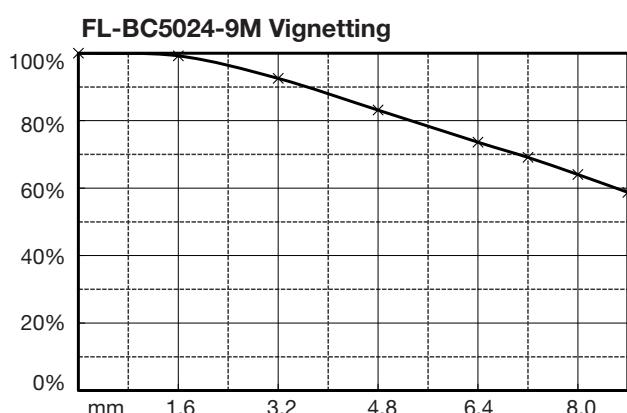

Compact design, Ø 42 mm

To suit 44 mm housings used for most 12 megapixel cameras, these lenses have a 42 mm compact design ideal for installation with high performance equipment.

Extremely low distortion

The optical distortion of this series is generally ~ 2%, (wide angle lens FL-BC1220-9M) or less, partially even < 0.1 %. The resulting extremely low-distortion images are excellent for use in the image measurement field.

Bright and clear to the periphery

Despite the small diameter of 42 mm, the vignetting has been reduced to the minimum. Combined with the 12 megapixel resolution, bright, high contrast images are achieved all the way to the edges.

HIGH PERFORMANCE UV LENSES

An optical system that employs optical-grade quartz glass for imaging in the near-ultraviolet region. This lens is optimized for application in the inspection of minute surfaces. Used for detection of counterfeit banknotes; falsified documents and credit cards, surface inspection of circuit boards for soldering defects.

- High performance quartz glass, enabling the capture of sharp images in the near-ultraviolet region
- Extended wavelength range (230 nm to 800 nm), with peak performance at 365 nm
- Compact design, ideal for integration into machine vision systems
- Optimised for use with band pass filters and UV illumination to provide falsified documents detection

UV Lens with near UV light. The texture of material and unevenness of ink can be recognized

MACRO FOCUS MOUNT		
FP-MUVG	Macro Focus Mount - 2mm for FL-HC1212B-VG, FL-CC1614A-VG, FL-BC2514D-VG	
FP-MU2M	Macro Focus Mount - 2mm for FL-HC1214-2M, FL-CC1614-2M, FL-CC2514-2M, FL-CC3516-2M, FL-CC5028-2M	

The Macro Focus Mount is a special camera mount with a 2 mm tube extension. The C-Mount flange focal distance will then be extended by 2 mm to 19.526 mm which will in turn reduce the lenses minimum object distance (M.O.D.).

In order to use our Macro Focus Mount, remove the standard C-mount on the lens and replace them with the appropriate mount above.

FP-MUVG

Please ensure you use the correct mount to lens as per the above chart. The FP-MU2M is designed for all the machine vision lenses except the FL-HC0614-2M and FL-CC7528-2M. In order to achieve even higher magnifications you can also use the close up adaptors and extension tubes.

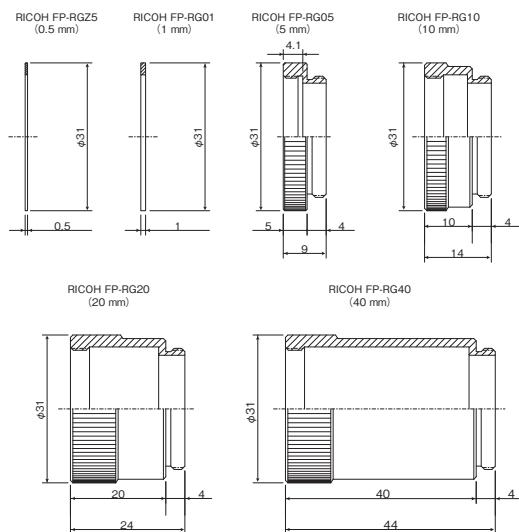

FP-MU2M

ACCESSORIES

for close-up applications

Part No.	Description			Specials
EXTENSION TUBES				
FP-RGZ5	Extension tube Min. order quantity = 10 pcs	0.5 mm	matt black (antireflex)	Price per Item
FP-RG01	Extension tube Min. order quantity = 10 pcs	1.0 mm	matt black (antireflex)	Price per Item
FP-MA	Extension tube	5.0 mm		
FP-RG05	Extension tube	5.0 mm	matt black (antireflex)	
FP-RG10	Extension tube	10.0 mm	matt black (antireflex)	
FP-RG20	Extension tube	20.0 mm	matt black (antireflex)	
FP-RG40	Extension tube	40.0 mm	matt black (antireflex)	
FP-RGST	Extension tube set (6 pieces) Contents: 0.5 mm / 1.0 mm / 5.0 mm / 10.0 mm / 20.0 mm / 40.0 mm			

TECHNICAL INFORMATION

CONVERSION TABLE FOR HORIZONTAL ANGLE OF VIEW

Lenses can be used on cameras with a smaller sensor, but not vice versa. By doing this, the viewing angle will change according to the table below.

Format	1/4	1/3	1/2	1/1.8	1/1.7	2/3	1/1.2	1/1	35mm 24x36
